

Login

Logging into Paperless Pipeline gets you into your account from any browser, on any device — enter your email and password, and you're at the *Home* page.

Introduction

You sign into Paperless Pipeline at the *Pipeline Login* page with your login email address and password. Anyone added to a Pipeline account can sign in. What you see once you're in depends on your role and permissions.

Two optional pieces shape the experience. Check **[Stay logged in for 7 days]** and Pipeline remembers you on that browser for a week. If your company requires *Two-Factor Authentication*, you'll enter a one-time security code (emailed to you) after your password.

How It Works

Where to sign in

The login page lives at `app.paperlesspipeline.com`. Bookmark that one. The marketing site at `www.paperlesspipeline.com` is a separate address — if it ever shows a certificate warning, the app you actually sign into isn't affected.

The core sign-in

Enter your **Email Address**. Enter your **Password**. Click **[Log In]**. You land on the *Home* page.

Stay logged in for 7 days

Check **[Stay logged in for 7 days]** before clicking **[Log In]** and Pipeline keeps you signed in for the next week on that browser. Handy on a device you trust. Skip it on anything shared.

Two-Factor Authentication at sign-in

If your company requires 2FA, Pipeline emails a one-time security code to your login address after your password. Enter the code (or click the link in the email) to finish. Check **[Remember this device for 30 days]** to skip the code on that device for a month.

For the full 2FA setup and behavior, see *Two-Factor Authentication*.

When sign-in won't work

Most "I can't log in" cases trace to one of three things — and the order matters when you're troubleshooting:

- **The wrong email.** You're typing an address that isn't on your active Pipeline profile (an old one from a previous brokerage, a forwarding alias, a typo).
- **An inactive profile.** Your profile was deactivated by an admin, by leaving the brokerage, or after a payment lapse.
- **The password.** Less common than the first two. If the email and profile are right, reset it from the login page.

Good to know

- **Anyone added to an account can sign in.** What you see once you're in depends on your permissions, not your sign-in.
- **Use `app.paperlesspipeline.com`** . Not `www` . Bookmark the app URL.
- **403 errors usually mean your IP is on a spam blacklist.** Switch networks, switch VPN node, or turn a VPN off.
- **The "stay logged in" check expires every 7 days**, even if you're using Pipeline daily. That's by design.
- **Old brokerage email won't suddenly work after a move.** Your email is bound to one Pipeline profile at a time. To bring it to a new brokerage, see *Move your Pipeline access to a new brokerage with the same email*.

Sign in to Paperless Pipeline

Get into your Pipeline account. Standard flow — email, password, optional checkbox.

Who can do this: Anyone with a Pipeline profile.

Go to `app.paperlesspipeline.com` .

Enter your Email Address and Password.

(Optional) Check [Stay logged in for 7 days] to skip signing in on this device for the next week.

Click [Log In].

You land on the *Home* page. If your company requires 2FA, Pipeline asks for the emailed security code next — see *Sign in with Two-Factor Authentication*.

Sign in with Two-Factor Authentication

Sign in when your company requires a one-time security code on top of the password.

Who can do this: Anyone whose company requires 2FA (unless an admin has opted them out).

Sign in with your email and password as usual.

Open the security-code email from Pipeline — it's sent to your Pipeline login address.

Click the link at the bottom of the email, or return to Pipeline and type the code.

(Optional) Check [Remember this device for 30 days] to skip the code on this device for the next month.

Click [Continue].

You're in.

Stay logged in for 7 days

Save yourself from re-entering your password every visit on a trusted device.

Who can do this: Anyone, on a device they trust.

From the Pipeline Login page, enter your **Email Address** and **Password** as usual.

Check [Stay logged in for 7 days] before signing in.

Click [Log In].

You stay signed in for a week on that browser. After 7 days, you sign in again — check the box again to renew. Skip this on a shared or public computer.
