

System Requirements FAQ

Pipeline is web-based. What matters is your browser, your connection, and a light amount of memory. Here's what readers ask most.

What browsers does Pipeline support?

Chrome (49+), Firefox (42+), Edge (80+), and Safari (9+). Keep them updated for the smoothest experience. Pipeline may stop supporting older versions over time.

What are the minimum system requirements?

- **RAM:** 2 GB+ on a desktop or laptop, 1 GB+ on mobile.
- **CPU:** 1 GHz or faster.
- **Connection:** broadband — 4 Mbit/s download / 1 Mbit/s upload or better.

Any modern computer clears this easily. The spec is a floor, not a target.

Does Pipeline work on Mac, iOS, or Android?

Yes. Pipeline runs in any modern web browser: Mac, Windows, iOS, Android, Linux, ChromeOS. On Mac and iOS, Safari and Chrome are both supported. On Android, Chrome and Firefox.

Is there a Pipeline app to download?

No. Pipeline is browser-only. You can add a Pipeline shortcut to your phone's home screen so it opens like an app, but it's still the website. See *Mobile Access* for how.

How do I update my browser?

Chrome and Firefox auto-update reliably. Check **About** in the browser's menu to confirm. Safari on Mac and iOS updates with macOS / iOS itself — update your operating system. Edge on Windows updates through Windows Update.

Pipeline is slow — what's the first thing to try?

Three things, in order. Check the Status Page to rule out a Pipeline outage. Do a hard refresh (**Ctrl + Shift + R** / **Cmd + Shift + R**). Confirm other large sites load fine to rule out your connection.

If you have more than ~5,000 unreviewed or unentered docs, that's a known cause of slowness too. See *Pipeline is running slowly* for the full walkthrough.

Is there a dark mode?

Yes. From *Personal Profile* → **Appearance**, pick the **Dark Theme**. Light is the default.
