

# Keyboard Shortcuts FAQ

Last Modified on 09/04/2026 11:13 am EDT

The shortcuts work the same on Windows and Mac, with just a different modifier key. Answers to the common questions about the Mac keys, where they work, and what they do.

## Do the shortcuts work on a Mac?

---

Yes. Use **Ctrl** + **Option** in place of **Ctrl** + **Alt**; the final key is the same.

## Do I have to be on a specific page for them to work?

---

No. Both the quick-add and quick-navigate shortcuts work from anywhere in Pipeline.

## What can I do with the shortcuts?

---

Add work and move around. Quick-add starts a new transaction or a doc upload; quick-navigate jumps to any top-menu page.

## Learn More

---

Move around Pipeline and add work without touching your mouse — a handful of hotkeys cover the moves you make most.
