System Requirements

Last Modified on 11/10/2026 12:22 pm EST

Use the latest version of Chrome, Firefox, Edge, or Safari to run Pipeline.

Introduction

Pipeline runs in a web browser, so there's nothing to install. Any of the major browsers works, on a computer, a phone or a tablet, as long as it's kept up to date.

The browser's version matters more than the computer, because newer parts of Pipeline rely on things current browsers can do and older versions can't.

Supported Browsers

Pipeline works in the latest version of:

- Google Chrome
- Mozilla Firefox
- Microsoft Edge
- Safari

Not sure yours is current? whatismybrowser.com shows which browser version you have and whether it's up to date.

Internet Connection

Any broadband connection runs Pipeline. We recommend at least 5 Mbps. Below about 1 Mbps, pages load slowly, and documents take the longest to open.

Keeping Your Browser Updated

Most browsers update themselves automatically, so you're usually already set. Safari and Edge update along with your computer's operating system, so keeping your OS current keeps those up to date too.

Frequently Asked Questions

Which browsers does Pipeline support?

The latest version of Chrome, Firefox, Edge, and Safari. Keeping your browser updated keeps everything working.

Does Pipeline work on a phone or tablet?

Yes. It runs in your mobile browser — see Pipeline on Mobile.

Why do I need to keep my browser updated?

For performance and full features. Support for outdated browsers is retired over time, so a current browser keeps everything working.

Pipeline is slow or looks wrong — is it my system?

It can be. Start with Why Is Pipeline Slow or Showing Old Content? to rule out browser and connection issues.
